Proper Power Steering Fluid Use

The automotive power steering system is a very complex and sophisticated hydraulic system which usually includes a power steering pump, drive belt(s), bearings, valves, hoses and seals.

Laboratory and field testing show that most Power Steering Fluids degrade measurably by 50,000 miles. The Steering & Suspension Uniform Inspection & Communication Standards (UICS) suggest a **one time** exchange of power steering fluid at 50,000 miles -- **if a service interval is not included in the manufacturer's maintenance schedule.** Additionally, the power steering fluid should be exchanged whenever a system component (pump, hose, rack & pinion, etc.) is replaced.

When exchanging power steering fluid or replacing a power steering pump technicians should make sure to use the correct fluid for the application. Vehicle manufacturers recommend many different types of fluids for use in power steering systems and technicians should always refer to the manufacturer's specifications before performing any fluid service.
